DOCUMENT CONTROL

Document ID	CNR-REG-001	Version	0.1
Status	Draft	Date	2026-11-05
Author	Amish Chadha	License	CERN-OHL-S-2.0
Project TRL	TRL 3 Proof of concept		
Repository	github.com/BoujeeEnjinia1701/canalrung		
Source	docs/07-regulatory.md @ ce4cb4e		

REVISION HISTORY

Version	Date	Author	Change
0.1	2026-11-05	Amish Chadha	First register (kit 1.9.1 upgrade); only sources named in CNR-PRB-001, CNR-CAL-001 and the BOM, plus two search listings; every classification and approval route is marked to assess

CanalRung regulatory and standards register

CanalRung is rescue and rope equipment, so product rules probably apply to a finished, sold station, but this register names no certification route as settled: nothing here is a classification, approval or legal opinion, and every row marked "to assess" needs a qualified reviewer before any product claim. The design is published as a research and educational prototype, never as certified life-saving equipment (CNR-PRS-001, PR-013). Method: STANDARDS section 23. Not legal advice.

Table 1. Regulatory and standards register.

#	Standard or regulation	Jurisdiction	What it covers	Applicability to this design	Owner (role)	Status
G1	EN 1891:1998, low stretch kernmantel ropes (type A and type B)	Europe, used worldwide	Construction, strength and testing of low-stretch ropes for rescue and work at height	The side ropes of option A are bought as 9 mm type B and sized on the catalogue 18 kN minimum; the rope must declare it. The standard was not read; the strengths are class values (CNR-CAL-001 E1)	Design lead	Applies to the bought rope; to confirm with the supplier datasheet
G2	Rescue ladder type approval: AFS 2004:3 and EN 131 as cited for the Shore Safety ladder in CNR-PRB-001	Sweden and Europe	Type approval of a marine rescue ladder; step and platform ladders	A competitor's route, for a rigid quay ladder. Whether any ladder or rescue standard applies to a thrown ladder on a canal bank is to assess	Regulatory reviewer	To assess
G3	Classification of the station: personal protective equipment, life-saving appliance, machinery, or none	EU, US and other	Which regime a bystander rescue ladder or hand winch falls under	Not established. Option C's hand winch would raise machinery and lifting-equipment questions	Regulatory reviewer	To assess
G4	Irrigation canal safety guidance (US Bureau of Reclamation and districts)	US	Canal safety practice, escape ladders and cables, signage, public information	Guidance, not a product rule; cited as prior art in CNR-PRB-001. A district permits a station on its bank	Co-design partner	Applies as guidance; permission to assess
G5	Site and land rules: permission to place a post and footing on a canal bank; local building or excavation rules; call-before-you-dig rules	Per district and country	Right to place and dig; buried services	A 500 x 1,200 mm footing is dug at every site	Co-design partner	To assess
G6	Liability and good Samaritan rules for a publicly placed rescue device	Per jurisdiction	Who is liable if the device fails or is misused	Not assessed; a published design does not remove the maker's duties	Legal reviewer	To assess
G7	Marking and instructions: pictogram, warning, emergency number	Per jurisdiction	Safety signs and language	The lid and front decals (BOM line 11); the sign standard to follow is to assess	Design lead	To assess
G8	CERN-OHL-S-2.0 hardware licence	International	Terms for the open design files		Maintainer	Applies

#	Standard or regulation	Jurisdiction	What it covers	Applicability to this design	Owner (role)	Status
	and MIT software licence			The repository licence (`REUSE.toml`); no product claim		
G9	Galvanising, concrete and steel section standards (post, footing)	Per country	Material grades for the post and footing	The BOM asks for S235 or better and 25 MPa concrete; no standard number is cited here	Design lead	To assess

Status: to assess, applies, does not apply, met by design, certification needed later.
