Scale 1:20; looking at the right side (along -X)

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 2,100 long, square; file the burr off both ends.
Mark one face as the canal side. 1,150 up from the bottom end (250 above ground when set), on the face centre line:
canal-side wall: drill 17.5 for the M16 bolt;
back wall, same axis: drill 21.5 for the crush tube.
Use a drill guide or drill press so both holes share one axis.
Deburr; cold galvanising paint on the holes and cut ends.
Mark a ground line 900 up from the bottom end.
Fits: 900 sits in the footing, 100 above its base;
plate and box on the canal face; cap on top.
